Module 15: Class Overview

Contents

Module 15: Class Overview 1
Prerequisites: 2
Scenario 3
Practice: Create Class - aisAssetInsurance 3

Prerequisites:

1. To complete this lab you will be using the VM provided to you.
    a. Login: builtin\AXLocalAdmin
    b. Password: <Available in LCS>
2. Open Visual Studio as administrator
    a. Right Click Visual Studio icon, Run as administrator
3. Exercises
    a. Model Creation & project Creation
    b. Label File Creation
    c. Base Enumeration Creation
    d. Extended Data Type Creation
    e. Table Creation
    f. Form Creation

Scenario

For Asset Insurance System scenario, a button will be added in the AssetTable form, which will be responsible for calling respective classes for calculating Premium amount, based on the Premium Calculation Type of the Insurance Vendor.

Practice: Create Class - aisAssetInsurance

1. In the Solution Explorer, right click Asset Insurance System project
2. Click Add > New Item
3. Under Operations Artifacts, Click Code
4. Select Class
5. Name: aisAssetInsurance
6. Click Add
7. Create this class as an abstract class
8. Add a class variable as follows

```
AssetTable       assetTable;
```

9. Add following construct method in the class

```
static aisAssetInsurance construct(Common _common)
{
    aisAssetInsurance  insuranceCalc;
    AssetTable          assetTable = _common;

    switch(VendTable::find(AssetTable::find(assetTable.AssetId).InsuranceVendor).aisInsuranceCalc)
    {
        case aisInsuranceCalcType::OnAssetPrice:
            insuranceCalc = new aisAssetInsurance_AssetValue();
            break;

        case aisInsuranceCalcType::OnDepreciation:
            insuranceCalc = new aisAssetInsurance_Depreciation();
            break;
    }
    return insuranceCalc;
}
```

10. Add following protected method in the class

```
protected void parmAssetTable(assetTable _assetTable)
{
    assetTable = _assetTable;
}
```

11. Add a blank run method, to be extended in the child classes

```
protected void run()
{

}
```

Proprietary and Confidential
Subject to Change

12. Add the main method as follows

```
public static void main(Args _args)
{
    aisAssetInsurance insCalc = aisAssetInsurance::construct(_args.record());
    insCalc.parmAssetTable(_args.record());
    insCalc.run();
}
```

13. Two more classes are created aisAssetInsurance_AssetValue & aisAssetInsurance_Depreciation extending from aisAssetInsurance
14. In both the classes run() method is overwritten with some Info message as follows

```
class aisAssetInsurance_Depreciation extends aisAssetInsurance
{
    public void run()
    {
        Box::info(assetTable.AssetId + " Depreciation based calculation");
    }

}
```

Similar, should be done in the aisAssetInsurance_AssetValue class also.

15. In the Solution Explorer, right click Asset Insurance System project
16. Click Add > New Item
17. Under Operations Artifacts, Click User Interface
18. Select Action Menu Item
19. Name: aisAssetInsurance
20. Click Add
21. Right click aisAssetInsurance > Properties
22. Object Type: Class
23. Object: aisAssetInsurance
24. In the Solution Explorer, find AssetTable.Extension under Form Extension
25. Create a new menu item button “aisPremiumCalculation” under Design > ActionPane > FixedAsset (ActionPane tab) > aisInsurance (Button Group)
26. Set following properties
    a. Name = aisPremiumCalculation
    b. Text = “Premium Calculation” (From Label file)
    c. Datasource = AssetTable
    d. Menu item type = Action
    e. Menu item name = aisAssetInsurance
27. In the Solution Explorer, right click the Project ‘Asset Insurance System’
28. Click Build Solution (or use Ctrl+Shift+B)
29. Review the Output screen to review process
30. Run AssetTable form and click on the new button. Based on the Calculation type of Insurance Vendor, message should pop up.
