Module 17: Database Manipulation

Contents

Module 17: Database Manipulation 1
Prerequisites: 2
Scenario 3
Practice: New method creation 3

Prerequisites:

1. To complete this lab you will be using the VM provided to you.
    a. Login: builtin\AXLocalAdmin
    b. Password: <Available in LCS>
2. Open Visual Studio as administrator
    a. Right Click Visual Studio icon, Run as administrator
3. Exercises
    a. Model Creation & project Creation
    b. Label File Creation
    c. Base Enumeration Creation
    d. Extended Data Type Creation
    e. Table Creation
    f. Form Creation

Scenario

For Asset Insurance System scenario, a button will be added in the AssetTable form, on clicking which premium lines will be generated based on the payment cycle selected.

Practice: New method creation

1. In the Solution Explorer, under Asset Insurance System project find class aisAssetInsurance and open
2. Add a new protected method createPremiumLines
3. Modify the code in the main method

```
public static void main(Args _args)
{

    aisAssetInsurance insCalc = aisAssetInsurance::construct(_args.record());
    insCalc.parmAssetTable(_args.record());

    if(str2Int(_args.parm()))
        insCalc.createPremiumLines();
    else
        insCalc.run();
}
```

4. In the Solution Explorer, find AssetTable.Extension under Form Extension
5. Create a new menu item button “aisPremiumLines” under Design > ActionPane > FixedAsset (ActionPane tab) > aisInsurance (Button Group)
6. Set following properties
    a. Name = aisPremiumLines
    b. Text = “Generate Premium Lines” (From Label file)
    c. Datasource = AssetTable
    d. Menu item type = Action
    e. Menu item name = aisAssetInsurance
    f. Parameters = 1
7. Open properties of menu item button aisPremiumCalculation and change the parameter value to 0
8. Write following code in the newly created method createPremiumLines()

```
protected void createPremiumLines()
{
    aisInsurancePayment     aisInsurancePayment;

    delete_from aisInsurancePayment
        where   aisInsurancePayment.AssetRecID == assetTable.RecId
        &&      aisInsurancePayment.FiscalYear == Global::dateStartYr(systemdateget());

    if(assetTable.PolicyAmount && assetTable.aisPaymentCycle != aisPaymentCycle::None && assetTable.InsuranceDate1)
    {
        RecordInsertList insurancePayment = new RecordInsertList(tableNum(aisInsurancePayment));

        Counter cnt;

        switch(assetTable.aisPaymentCycle)
        {
            case aisPaymentCycle::Monthly:
                {
                    cnt = 12;
                    break;
                }
            case aisPaymentCycle::Quarterly:
                {
                    cnt = 4;
                    break;
                }
            case aisPaymentCycle::Halfyearly:
                {
                    cnt = 2;
                    break;
                }
             case aisPaymentCycle::Yearly:
                 {
                     cnt = 1;
                     break;
                 }
        }

        int i, insCnt=0;
        for(i = 1; i<=cnt;i++)
        {
            int _month, _year;
            aisInsurancePayment.AssetRecID = assetTable.RecId;
            aisInsurancePayment.PremiumAmount = assetTable.PolicyAmount;
            aisInsurancePayment.SerialNum = i;
            aisInsurancePayment.FiscalYear = Global::dateStartYr(systemdateget());
            _month = (mthOfYr(assetTable.InsuranceDate1) + (12/cnt)*i) mod 12;
            _year = year(systemdateget());
            _month = _month==0?12:_month;
            _year = _month > mthOfYr(assetTable.InsuranceDate1)?_year:_year+1;
            aisInsurancePayment.DueDate = mkDate(dayOfMth(assetTable.InsuranceDate1), _month, _year);
            insurancePayment.add(aisInsurancePayment);
            insCnt++;
        }
        insurancePayment.insertDatabase();
        Box::info(strFmt("@AISLabelFile:ais14", insCnt));
    }
    else
    {
        Box::okCancel("@AISLabelFile:ais15", DialogButton::Cancel);
    }
}
```

9. In the Solution Explorer, right click the Project ‘Asset Insurance System’

10. Click Build Solution (or use Ctrl+Shift+B)
11. Review the Output screen to review process
12. Run AssetTable form and click on the new button. Based on the Calculation type of Insurance Vendor, message should pop up.
